

Discover our new **MASTERPIECE**

The **FAST** is a revolutionary film feeding system which accurately delivers film to the pallet without reacting to a demand. The best way to control film failure, film ripping and breakage.

Conventional methods rely on sensors or electronics to react to a film demand and then speed up a motor to meet it. This creates what is known as “lag”. The greater the lag, the greater the excessive film force, especially as you go around the corners. On the graph below, you can see the impact of lag on excessive film force:

Without lag, the film force distribution is a flat line (0 excess film force all around). As you increase the lag, you can see that it increases the excess force. The excess force can either create too much tension on the corners or even create film breaks.

WE FEAR NO PACKAGING CHALLENGE

WWW.WULFTEC.COM

Because the **FAST** eliminates excessive stress on the film you can use the film to its top performance. With conventional methods, you reduce the film tension to a point where the film does not break and waste up to 35% film force! With the **FAST** you don't need to do this. Because you can now use ALL the force that is in the film, FILM CONSUMPTION can be dramatically reduced (up to 35% reduction) while achieving same containment, FILM BREAKS are eliminated, and FILM WASTE due to damaged rolls or punctures are not a factor anymore.

All of this while maintaining load integrity!

The FAST takes care of the most challenging situations!

Your loads have:

- Sharp edges
- Protruding objects
- Slip sheets / tear sheets

Your product is:

- Very light
- Out of shape
- PET bottles – Fragile

Your film rolls are:

- Damaged on the edges
- Punctured
- Very light gauge*

Not a problem, it's not even a challenge anymore!

*Testing made with 47 gauge film with punctures @ 250% prestretch with a 35 RPM rotation without ANY film break.

Field tested by leading film manufacturing companies who confirm this is the **"Best system on the market!"** **"Results are remarkable!"**

With Wulftec's new **FAST** you are on the right track.

While using less film, the **FAST** guarantees secure load containment, no film failure, reduced waste, remarkable performance with all film and has a positive environmental impact.

The **FAST** can also be retrofitted on your current stretch wrapper. Please contact your Retrofit Regional Rep for details.

**Why wait any longer to realize all these savings...
