

WULFTEC® STRETCH WRAPPERS Safety Package

Safety is a growing concern for all businesses and the safety requirements have changed a lot over the years. To meet these new requirements, Wulftec offers custom packages to bring the safety level up to a Category 3. These may be installed on new or existing equipment regardless of the brand for both semi-automatic and fully automatic machines. The key features of our safety package: Light Curtains, Electric Air Dump Valve and Fencing.

Light Curtains

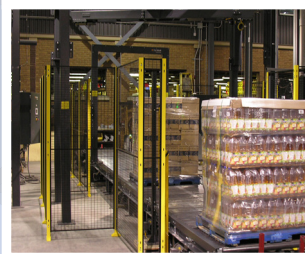

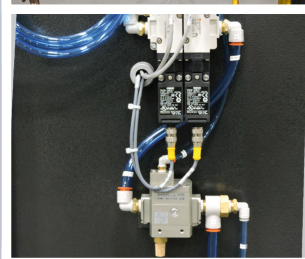

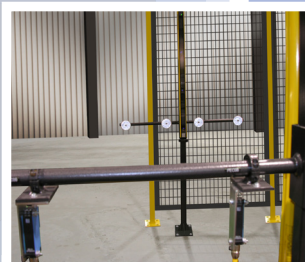

Invisible beam system with muting photoeyes to protect the entrance and exit of the process area from human intrusion. The muting system allows loads to enter and exit the wrap zone without compromising safety. Includes 4-beam SICK M4000 light curtains with muting photoeyes. Category 3 safety controller, dual-channel E-stop circuitry and a spring return key switch for light curtains override.

Electric Dump Valve

Electric air dump valve Category 3 to purge the pneumatic system (including the cylinders) when an E-stop is pressed or process area entrance is breached (fence key switch and/or light curtains), as well as when the machine power is disconnected.

Fencing Safety

The wrapping zone is enclosed by heavy-duty personnel obstruction fencing. The fencing is heavy duty with safety yellow support posts and black wire mesh sections for improved visibility into the wrap zone. The overall height of the fencing is 90" from the floor with a 4" sweep space under the panels. Mesh opening size is in line with safety standards.
